CARGO CARE

# LINER

## FOR BULK FISH

### TRANSPORT BULK FISH IN PRISTINE CONDITIONS

When it comes to shipping frozen fish in bulk, reefer temperature regulation and hygiene are key factors.

Container lining is the perfect way to protect your cargo. We meticulously install your LINER for bulk fish, inspect and prepare the unit to ensure your bulk fish shipment receives optimal care during transportation.

### YOUR BENEFITS

#### TAKE ADVANTAGE OF THE MOST HYGIENIC SOLUTION

LINER for bulk fish provides a completely clean environment for your cargo. It greatly improves the air circulation as it avoids scales, brine or bycatch in the rails.

#### REDUCE ENERGY CONSUMPTION

With improved air circulation, the set point temperature is reached faster and requires less energy consumption.

#### KEEP THE SET POINT

Maintain an even temperature throughout the container, ensuring your entire shipment of fish is delivered in pristine condition.

### HOW DOES IT WORK?

1. During the booking stage, we select the optimal liner to suit your need.
2. We set up the liner in the reefer container to be stuffed at POL.
3. The reefer is unstuffed at POD and we remove the liner.

Temperature monitoring along the trip is available upon request.
